What is dynamicTV?

Is a system through which television services are delivered using Internet Protocol suite over a packet-switched network such as the Internet, instead of being delivered through traditional terrestrial, satellite signal, and cable television formats.

IPTV technology supports the transmission of standard video programs over the Internet and IP. Allows a television service to be integrated with broadband Internet services and share the same home Internet connection.

How does it work?

dynamicTV works by plugging your high speed Internet connection into a set-top box that's connected to your television. Once the connection is made, the set-top box assembles the code from your phone line into audio and video. Each TV in the home must be hooked up to a set-top box in order to receive the signal.

How is dynamicTV different than Cable Television?

Sends only the program requested by the viewer. A new stream is transmitted to the viewer when the channel is changed. With traditional TV, broadcasts all the channels simultaneously.

In theory, allows dynamicTV users more control over their television programming and ability to customize it to their preferences.
